

Omega Products International, Inc.

Innovatively Leading the Industry

Omega Products takes pride in providing a large selection of stucco and acrylic finishes that can produce endless design possibilities. All products are manufactured in our state-of-the-art facilities to our exacting quality standards. Only the best materials are utilized to ensure consistent and vibrant colors. Additionally, they are backed by Omega's excellent technical support and warranty plans.

Omega offers 45 standard stucco colors that are shown in this color chart. Our sophisticated color lab can also produce a spectrum of custom colors. Provide us a color sample and we can match it.

*Let Omega color your world, inspire you
and bring your project to life.*

ColorTek Premium Exterior Stucco

ColorTek is a premium, factory blended, stucco finish manufactured from portland cement, hydrated lime, graded aggregates, and proprietary performance enhancing additives. ColorTek comes in five aggregate combinations that allow design flexibility and a variety of finish textures. The following aggregate combinations are available, in order of aggregate size:

- Coarse:** Used to create heavy laced texture, sand finish, or machine dash finish.
- 16/20:** Used to create traditional texture, sand finish, or machine dash finish.
- 20/30:** Used to create a fine texture or sand finish.
- 30/30:** Used to create a uniform fine sand finish.
- Smooth Coat:** Used to create a smooth Santa Barbara or Mission type finish.

ColorTek is available in Base 2 (grey), Base 10 (white), Base 1 (white/grey) or Base 5 (dark grey), which may be colored in the field using the Omega ColorPak system. Alternatively, ColorTek is offered as a factory mixed colored stucco. Minimum quantities may apply when ordering factory blended products.

OmegaFlex

100% Acrylic Stucco

OmegaFlex finishes were the first 100% acrylic stucco coatings designed for exclusive use over cement-based substrates. OmegaFlex can create a look that is similar to traditional portland cement plaster finishes, but with more uniform color, less efflorescence, improved water-resistance, and less cracking.

These attributes make OmegaFlex the obvious choice for both commercial and residential projects. OmegaFlex may be used as a high grade finish for the Diamond Wall One Coat Systems, standard three-coat systems, as well as properly prepared concrete surfaces. OmegaFlex can also be applied as an interior finish over various types of interior wall boards and ceiling surfaces.

OmegaFlex is available in a variety of colors, including the ColorTek colors shown in this chart. The standard OmegaFlex colors can be found in the Omega Acrylic Color and Texture Collection.

ColorTek Textures

ColorTek can produce a wide variety of textures. Some of the most popular texture choices are shown below. Actual stucco textures will depend upon application method, job conditions, and other factors. The cost to achieve these textures will vary due to the material and labor required. Please consult your applicator for actual costs related to a specific finish texture.
